

ST. LOUIS, SUNDAY MORNING, JULY 15, 1888.

ORGANS AND ORGANISTS.

THE MUSICAL PIPES THAT ARE HEARD IN OUR CHURCHES.

Large and Small Organs—The Greatest Organ Ever Built, and Their Cost—Local Musicians Who Manipulate the Key-Boards—The Youngest Organist in St. Louis—He Began Playing the Pedestal Organ in the Church at the Age of 9 Years.

Organists in technical points, in any portion of the world, perhaps, Waldemar of Eastphalia, Germany, Cayle's soil of Paris is credited with some of the greatest European workmanship and Geo. Willis & Sons of London are the makers of the "American" organs.

The most far-famed organ builder in the world, perhaps, Waldemar of Eastphalia, Germany, Cayle's soil of Paris is credited with some of the greatest European workmanship and Geo. Willis & Sons of London are the makers of the "American" organs.

THE FALMOUTH-KAYE THE FALMOUTH-CLEARING SAL.

This Week New Lines from the Reserve!

If you need a SUIT, or a COAT AND VEST for yourself or the Boys; or a HAT, SHOES or FURNISHING GOODS of any description and want to make a dollar do the work of two, come this week! The way we are slaughtering goods makes them go fast!

SPECIAL--KEEP COOL! We offer this week 3,000 Genuine English Seersucker Coats and Vests for Gents and Youths, 27 different styles of stripes and shades; warranted fast colors and equal in appearance to East India goods, which cost \$7.50 to \$10. We put them on sale at \$1.50. It will take an expert to tell them from East India Goods.

See the Exposition of Them in Our Grand Show-Windows.

FALMOUTH--BROADWAY AND MORGAN.

IS DEATH PAINLESS?

DR. HAMMOND DISCUSSES THE PHENOMENA ATTENDING DISSOLUTION.

His Reasons for Believing That Men Die Painlessly--The Functions of the Brain as They Appear to the Heart and Lungs--Animals and Human Beings Living Without Brains--Heart-Beated Experiments of Which Dr. Hammond Has Had Cognizance.

It is not necessary to be convinced that a man is suffering from a painful process of the act of death in order to believe that he is suffering from it. The physical phenomena that lead up to the departure of vitality from the body are often characterized by great suffering.

There may be pain, suffocation due to the irregularity of the action of the heart and lungs, and above all, intense mental anguish. But when death begins all feeling of discomfort in mind or body disappears, in whatever part it may be situated, cannot be perceived; the heart may beat with still greater frequency, the lungs fall still more rapidly to perform their functions; nothing has happened to dissipate the fear or remorse or sorrow that has harassed the dying person, but the perceptions, the intellect, the emotions, the will are blunted and no longer respond to excitations that formerly moved them.

Death as we see it in persons who have suffered from a more or less protracted illness, is but the result of an act which is accomplished in a few moments of time. It may even last for several hours, during which period the vital forces are exhausted little by little, and gradually in fact that we are not able to determine the exact time at which life becomes extinct.

THE ORGAN OF THE TEMPLE ISRAEL.

Church is an organ which has a history. It was built in Gough, Germany, and brought to St. Louis by Rev. Prof. Roby, who had been necessary to rebuild it several times, but the organ, to all extent appears the same.

electric action, and music, and contrasts are to be awarded. This is the organ of Prof. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the Century Methodist, Sixteenth and Pine, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the First Presbyterian, Fourteenth and Locust, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the Washington Avenue Presbyterian, Chestnut and Locust, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the First Baptist, Fourteenth and Locust, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the Second Baptist, Fourteenth and Locust, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the Second Baptist, Fourteenth and Locust, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the Second Baptist, Fourteenth and Locust, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

At the Second Baptist, Fourteenth and Locust, Misses Washburn, a great organ was purchased by the organist, Mr. J. G. Roby, who has been necessary to rebuild it several times, but the organ, to all extent appears the same.

described show that there has been no suffering mental or physical; the consciousness is intact and the position of the body that of the living man. The respiration is regular for a considerable period before death is reached. The heart continues to beat, the lungs are expanded, there are no convulsions, the recumbent posture is attended with an increase in the feeling of suffocation, due to the interference with the respiration, and the patient is obliged to pass the greater part of the day and night in a state of distress. The respiration is difficult, the limbs are congested, there are no convulsions, the recumbent posture is attended with an increase in the feeling of suffocation, due to the interference with the respiration, and the patient is obliged to pass the greater part of the day and night in a state of distress.

It is not necessary to be convinced that a man is suffering from a painful process of the act of death in order to believe that he is suffering from it. The physical phenomena that lead up to the departure of vitality from the body are often characterized by great suffering.

There may be pain, suffocation due to the irregularity of the action of the heart and lungs, and above all, intense mental anguish. But when death begins all feeling of discomfort in mind or body disappears, in whatever part it may be situated, cannot be perceived; the heart may beat with still greater frequency, the lungs fall still more rapidly to perform their functions; nothing has happened to dissipate the fear or remorse or sorrow that has harassed the dying person, but the perceptions, the intellect, the emotions, the will are blunted and no longer respond to excitations that formerly moved them.

Death as we see it in persons who have suffered from a more or less protracted illness, is but the result of an act which is accomplished in a few moments of time.
